

```
1 #!/usr/bin/python
2
3 import socket                # Import socket module
4
5 s = socket.socket()          # Create a socket object
6 host = socket.gethostname()   # Get local machine name
7 port = 12345                  # The server port
8
9 s.connect((host, port))
10 s.send('Hi, server!')
11 print 'REMOTE:', s.recv(1024)
12 s.close                      # Close the socket when done
```
